EDUCATION

Studied as an Interior Designer – 2005/2011, graduated with honors.
Took courses:
Frontend development,
UX Design,
UX/UI Design,
English language.

CAREER

Right after completing my studies in 2011, I began working as a UI/UX designer.
Over the years of work, I learned to work in large and small teams. I took part in the interviews of new employees for the position of designer.

Worked with clients during initial business meetings to resolve orders and during the development of products, projects, and applications.

Creating a full stack of development processes for the project:
Empathise with the users - learning about the audience.
Define the problem - identifying the users' needs.
Ideate - generating ideas for design.
Prototyping - turning ideas into concrete examples.
Test (evaluating the design), Attitudinal / Behavioural and Quantitative.

EXPERIENCE WITH APPLICATIONS

Throughout my working career, I had to use various tools and applications for design. When working on a product, application, website, you always need some additional skills to achieve the best result.
This becomes especially necessary for creating new and exclusive projects or startups. In addition to design tools, knowledge of programming languages for Web and Mobile applications has become very useful.
